BUSINESS PROFILE

South Africa

Business systems that work together.

Automation, integration, AI and Power BI for South African businesses.

We automate the manual work out of your business, connect the systems you already have, and put AI and clear reporting on top.

Blank Devs (Pty) Ltd

01 / COMPANY & OFFERING

A practical partner for your business operations.

Blank Devs is a South African company led by Wisani Baloyi. We help operations, finance, HR, IT and programme teams address manual processes, disconnected records and reporting that takes too long to prepare.

Our work centres on Microsoft Power Platform, Dynamics 365, Copilot Studio and Power BI. We start with the people, processes and systems already in place, then define the right scope for the business need.

FOUR SERVICES, DESIGNED TO WORK TOGETHER

Business Automation	Move requests, approvals and recurring tasks through a defined workflow.
System Integration	Connect applications so records can move between the systems that need them.
AI Solutions & Agents	Handle recurring questions and document tasks with human review.
Data & Power BI	Bring information from separate sources into dashboards and recurring reports.

02 / SERVICES

Reduce manual work. Connect your systems.

Business Automation

We build workflows and internal applications for repetitive work, including approvals, data capture, notifications and document handling.

WHAT WE DELIVER

- Process mapping and written requirements.
- Approval flows, internal forms and scheduled tasks.
- Notifications, document generation and SharePoint workflows.

TYPICAL APPLICATIONS

Leave and claims approvals; requisitions; support tickets; booking requests; quotes and invoices.

Platforms: Power Automate, Power Apps, Dataverse, SharePoint and Microsoft Teams.

System Integration

We connect business applications and structure the records they exchange, so teams can work from shared information.

WHAT WE DELIVER

- Integration audits and data mapping.
- Connections between Dynamics 365, Dataverse, websites and APIs.
- Error handling, monitoring and technical documentation.

TYPICAL APPLICATIONS

Web enquiries entering the CRM, booking updates reaching customer records, and several systems feeding a common reporting model.

Platforms: Dynamics 365, Dataverse, Power Automate, REST APIs, webhooks and custom connectors.

02 / SERVICES

Make information useful. Give managers a clear view.

AI Solutions & Agents

We build agents and AI-assisted workflows for defined tasks, from answering staff questions to extracting document details and routing requests.

WHAT WE DELIVER

- AI readiness assessment and a practical roadmap.
- Agents using approved content; document extraction and summaries.
- Defined scope, access controls and human review.

TYPICAL APPLICATIONS

Internal knowledge assistants, repeated support questions, and document workflows that prepare information for a reviewer.

Platforms: Copilot Studio, Power Automate, Dataverse, SharePoint and modern AI platforms.

Data & Power BI

We combine scattered sources into dashboards, client reports and management information that support business decisions.

WHAT WE DELIVER

- Data preparation and reporting models.
- Power BI dashboards, paginated reports and client reporting.
- Recurring reports, quarterly reviews and board packs.

TYPICAL APPLICATIONS

A single view of a client or programme, regular management packs, and client reports with access limited to each client's data.

Platforms: Power BI, Power Query, DAX, SQL, Dataverse, SharePoint and Excel.

03 / DELIVERY APPROACH

Written scope. Staged delivery. A clear handover.

We document requirements before building. Each engagement has an agreed scope and timeline, with demonstrations and user feedback as the work develops.

01	**Discover**	Understand the process, users, systems and constraints.
02	**Specify**	Agree written requirements, data structure, a fixed quote and timeline.
03	**Build**	Develop the solution iteratively and review demonstrations together.
04	**Test in stages**	Start with a beta group, expand to a wider group, then release fully.
05	**Hand over**	Provide documentation and training, with access and security configured.
06	**Support**	Agree an optional monthly support or reporting-management plan.

COMMERCIAL APPROACH

Fixed-price projects are scoped around the processes, users and systems involved. We review existing licences during discovery; ongoing Microsoft licence costs are separate.

Your team brings: a process owner, representative examples and time for user review.

04 / CONTACT

What would you like to automate, connect or report on?

Start with one process or report that takes more effort than it should. Bring an example of how it works today, the systems involved and the outcome you need.
